

Topper Kit for the Adjustable Ground Mount Installation Guide

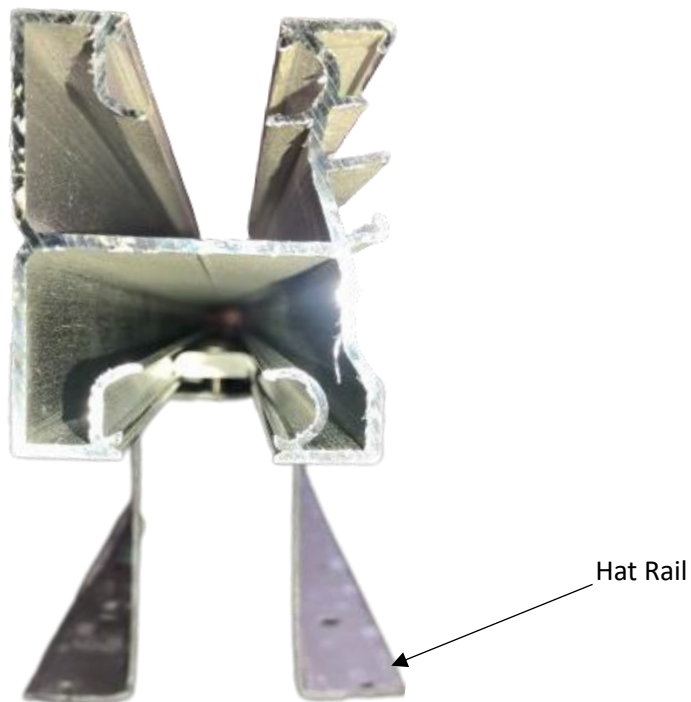

The topper kit was designed to be used with the Adjustable Ground Mount 2.0 to mount large modules. When using the Hat Rail, modules can only be mounted at specific locations. This shortcoming is overcome by using the topper kit which allows modules to be mounted anywhere along the length of the rail. The steps to install the topper kit are as follows:

1. Insert the K-nut with the carriage bolt into the lower channel of the Ground Hog Rail.

2. Place the assembly from Step 1 onto the Hat Rail.

3. Install the Flanged Nut onto the carriage bolt.
